

## Vehicle Immobilizer System

eCut is an immobilizer system for theft prevention, controlled by a keypad. The eCut supports up to two wired and one wireless cut units, using the D-Out interface, and controlled by a single keypad.

The eCut immobilizer can be used as a stand-alone solution for anti-theft applications based on an advanced programmable keypad or as part of a connected car solution with a full tracking / telematics solution, based on ERM's StarLink devices.

The wireless cut unit can be placed anywhere in the vehicle, so it will wirelessly communicate with the Keypad for maximum protection of the vehicle.

### Key Features:

- Highly reliable system, alerts when disrupted
- Automatic, passive immobilizing system
- 60 seconds passive arming
- Programmable PIN Code
- Flashing status LED (Armed, Disarmed, Service Mode)
- Wireless cut unit
- Service mode
- Easy and concealed installation
- Tamper proof
- Optional - Up to 2 wired cut units

### Technical Specifications:

- Operational voltage: 12VDC
- Cut units contacts rating:
  - Wired cut unit: 10A
  - Wireless cut unit: 10A
- Wireless RF cut unit frequency : 433.92Mhz
- Power consumtuin:
  - Armed <15mA
  - Disarmed (Ignition Off) <5mA
  - Disarmed (Ignition On) < 400mA
