

eMix

Cement Truck Rotation Monitoring Solution

eMix is designed for monitoring cement trucks.

The eMix enables the remote monitoring of the rotation and the direction of a cement truck mixer drum.

eMix uses dedicated sensors to count and report each drum rotation and its direction.

When Using the eMix, along with a StarLink telematics device, it is possible to know where, when and how much cement is being unloaded.

Key Features:

- Monitor the drum rotation direction
- Monitor the amount of drum rotations
- Operating power: 12/24V
